

# telePROTECT 900

The personal security system you can rely on.

## Ascom Wireless Solutions

### Messaging, personal security and cordless telephony in one

The Ascom concept for radio based cordless communication comprises the teleCOURIER 900 paging system, the telePROTECT 900 personal security system, the cordless telephone systems Ascom 9d and CTS 900 and the teleCARE M nurse call system.

The concept has been developed to increase accessibility and security of people on the move in their workplace. Each system can be fully integrated with any of the others as well as with a number of applications.

For optimal solutions all Ascom systems can be supplemented, extended and updated with new applications and features. They are also fully compatible with earlier versions and to other open systems.

Getting on with your professional tasks: working in a shopping centre or on the night shift in a hotel; examining a patient in a health care facility; working alone in an isolated area of an industrial plant; or guarding inmates in a prison or other correctional institution.

All of a sudden, out of nowhere, you're face-to-face with danger, and exposed to threats, intimidation or risk of accident. You need to call for help. Thankfully, you are safe in the knowledge that your workplace is equipped with a telePROTECT 900 personal security system from Ascom.

#### Security and simplicity

If you find yourself in a vulnerable or threatening situation, a telePROTECT 900 system enables you to quickly send an alarm signal and know that somebody has received it.

The basic thinking behind the system is very simple. When you need to call for help, you press a button on a pocket unit to transmit a radio-based alarm signal. A central unit receives your alarm signal that then, depending on how your system is configured, automatically alerts your colleagues and/or activates relevant alarm procedures.

Each installation of telePROTECT 900 is tailor-made to satisfy the particular security needs in a particular profession and a particular situation. The flexible and modular nature of the system means that

alarms can be presented exactly as you want them to be, e.g. via alarm computers, paging messages, lamps, sirens, automatic door control... perhaps even climate control.

For many of our customers, we have installed personal security systems that feature integrated telePROTECT 900 location functions. These enable you to determine the location and movement direction of a pocket unit transmitting an alarm.

The possibilities as to how you can configure your alarm signals and alarm processes are endless! The most important thing is that you receive all the necessary assistance that you require for the particular situation in which you find yourself. A telePROTECT 900 system from Ascom ensures that this is the case, every time.

#### Alarms tailored for special circumstances

Threats and risks vary depending on your work situation. Consequently, we have developed different types of alarms, both manual and automatic. The simplest type is activated when you press a button and, when necessary, you can do this very discreetly, e.g. if you feel threatened whilst working with a person whose confidence you are trying to gain.

“Pull-cord” - and “no-movement” - alarms helps you in situations when you can't trigger the alarm yourself.

If you run the risk of physical violence, there are various kinds of automatic alarms. One type is the 'pull-cord' alarm, which is triggered if someone snatches the pocket unit off you. Other alternatives are 'man-down' and 'no-movement' alarms, which are means of communicating when you are unable to activate the alarm yourself. These alarms, in combination with the location feature, allow for optimal personal security when you are working alone.

Moreover, the modular system architecture enables you to easily modify and extend the system to meet future requirements.

#### Robust pocket units

The pocket units are available in a number of versions. From small alarm buttons with push button alarm only to transceivers with alarm, paging and two-way speech facilities. All have been developed to combine good design and practical function. As such, they are easy to carry, and resistant to physical impacts and external influences such as water, dirt and dust. An EX version is also available for use in environments where there is risk of explosion.

Development work has concentrated on combining good design and practical function.

#### Reliability & peace of mind

If you are exposed to danger at your workplace, you need to know that your personal security system will function properly whenever you need it – your life could depend on it.

The telePROTECT 900 system from Ascom has an unrivalled track record when it comes to areas of use and reliability. As such, thousands of employees in all types of professions all over the world are able to go about their everyday tasks knowing that their call for help will be heard.
