Five key ways Ascom Myco 3 supports clinical information flows for **better-informed care delivery**

1. Gain time for patient care

Bringing up-to-date information closer to clinicians helps streamline care delivery. Clinicians can use the Ascom Myco 3 and apps to enter vitals to EMRs/EHRs from the bedside, and to scan barcodes to identify patients and verify IDs.

2. Keep clinical information and task overviews at hand

High resolution 5" screen provides optimal viewing, and supports the management of alerts, requests, assignments and clinical information such as images, lab results, etc.

3. Communicate and collaborate efficiently

The Ascom Myco 3 uses cellular networks and VoWi-Fi to provide seamless communication and collaboration— from the point of care to anywhere.

4. Always available for use

The Ascom Myco 3 features a truly hot-swappable battery that can be replaced without powering down the device or logging out of active apps or activities.

5. A professional device for healthcare professionals

Combines the ease-of-use of an Android™ smartphone with the enterprise-level security and durability essential in healthcare environments. A robust device, the Ascom Myco 3 is disinfectant-ready and dust- and water-resistant.

About Ascom

Ascom closes digital information gaps across points of care, creating actionable, context-rich insight that supports enhanced clinical decision making. Ascom streamlines the flow of critical information and care activity to help clinicians improve care management, coordination and delivery.

Bringing a dynamic portfolio of clinical and care solutions into one integrated, flexible framework, the Ascom Healthcare Platform enables healthcare facilities to harness the power of clinical information, optimize care workflows and maximize the value of their existing technology investments.

Many of the world's advanced healthcare institutions, including leading hospitals and digital-forward facilities, utilize Ascom technology to help elevate clinical and operational performance.

Multiple products from Ascom and third parties support the features and functions described. All Ascom solutions may not be available in specific countries.

Bridging clinical information gaps for **better-informed care**

The Ascom Myco 3 helps bring together clinical care data that all too often is dispersed and difficult to collect. And thanks to a portfolio of clinical apps, the Ascom Myco 3 gives clinicians timely access to this data—helping to streamline care coordination, care responses and care delivery.

Enables more efficient care at the bedside

- Single-entry registration of vitals to EMRs/EHRs
- Barcode scanning of patient IDs
- Point-of-care access to and management of clinical information

Supports fast response times

- Creates visibility to patient alert and request notifications
- Helps reduce alarm fatigue, noise and unnecessary interruptions; contributes to calmer environments
- Task and workload management helps align teams and ensure timely delivery of patient requests

Faster availability of clinical information updates

- Quicker access to vitals, data and trends compared to paper-based documentation
- Single-entry registration of clinical information reduces double documentation and the risk of errors and omissions
- Provides guided automated calculation of medical scores

The Ascom Myco 3 makes clinical information accessible and available in the hands of clinicians. It lets them access, update, and share information for clinical insights, care decisions and care delivery. It connects clinicians with patients, colleagues, devices, labs, and alert/nurse-call and EMR/EHR systems.

Designed for demanding environments, the Ascom Myco 3 combines apps, tools, messaging, voice and more. Together with the Ascom Healthcare Platform it bridges digital information gaps across points of care—creating actionable insights that enable informed clinical decisions.

Turns multi-step, multi-location care processes into streamlined workflows. Clinicians can collect and register vitals to EMRs/EHRs from the bedside; they can accept or re-direct alerts and requests; coordinate and communicate with colleagues; receive lab results and clinical data; scan barcodes to verify patient IDs; photograph and share detailed images of body areas, wounds, etc.

Streamlines clinicians' access to, and use of, clinical information. Interoperability with existing health information systems supports faster availability of clinical information in EMRs/EHRs.

Ascom Healthcare Platform solutions are designed to integrate, orchestrate and enable aligned digital clinical information and workflows

The Ascom Healthcare Platform is a portfolio of applications, services, devices and smartphones. It provides modular healthcare information and communication solutions that integrate with existing information systems. These solutions enable end-to-end information flows between systems, people and devices at virtually any point of care.

Part of the Ascom Healthcare Platform, the Myco 3 helps ensure that clinical information from multiple sources reaches clinicians—when and where they need it and in secure, healthcare-approved formats.

Better information for better-informed care decisions

*An Ascom Myco 3 solution makes available a wide spectrum of up-to-date clinical information.*

Bedside care: single-entry vitals registration to EMRs/EHRs without leaving the patient.

Barcode scanning: secure verification of patient IDs when administering medications.

Lets clinicians access and share lab results, images, requests and alerts while on the go.

Communicate and coordinate effectively. Requests, messages and tasks go directly to assigned recipients.
