

ConnectedCare Module

Meal Ordering (Third-party) Module

The right meal at the right bed.

One of the most time-consuming processes at the point of care is the recording of patients' meal requests. Often, this non-medical task is taken over by the nursing staff and, in the best case, by a service team implemented for this purpose. With the Meal Ordering (Third-party) Module kitchen management systems can be easily integrated, allowing patients to order menus independently. All ordering data flows directly into the kitchen management system and provides maximum transparency regarding the current ordering status in the hospital – the result is optimal kitchen planning with less strain on the nursing staff.

Benefit

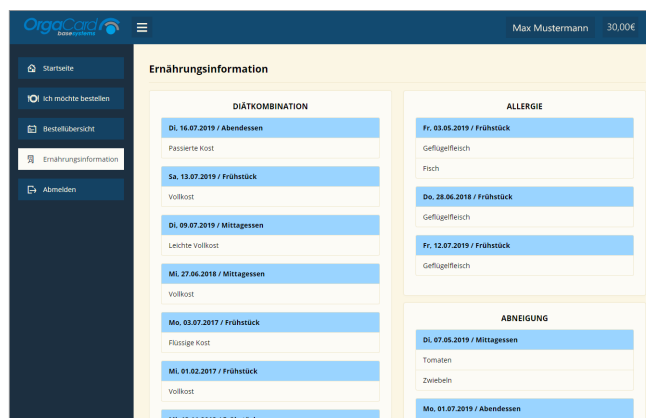

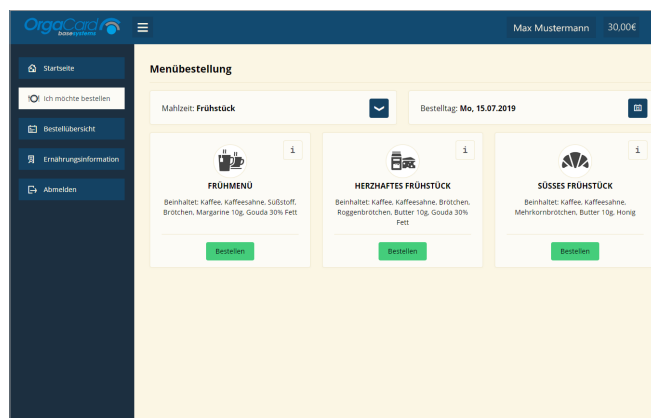

- Patients can order their own meals using the ConnectedCare tablet or a personal mobile device and can adjust the order if necessary
- Relief of the employees with regard to consulting and supporting patients with the meal selection and the entry of meal orders
- Reduction of process costs for patient catering
- Meal selection according to the patient's diet

Scope of Service

The Connection software is prepared for the integration of a meal ordering application. It does not matter whether this is a native or web-based application offered by the kitchen management system manufacturer. To authenticate the patient, the patient ID / case ID can be transferred. As a result, patients only see meals for selection that suit their particular diet (e.g. diabetics, allergy sufferers, etc). We already work successfully with leading providers such as OrgaCard, Sanalogic, HospiChef, ChefCulinar (JOMOssoft) and LOGIMATIKA (LogiMen). If you are missing your kitchen management provider, please contact us.

Exemplary representations

Integration of the third-party supplier OrgaCard Siemantel & Alt GmbH

Requirements

- ConnectedCare
- HIS interface is required for automatic patient identification
- Establishment of a network connection from the network of the patient infotainment system to the network of the meal ordering system
- Use of a meal ordering system with integrated patient meal ordering application (e. g. OrgaCard)
